

TOWER DEFENSE INSTALLATION SETUP

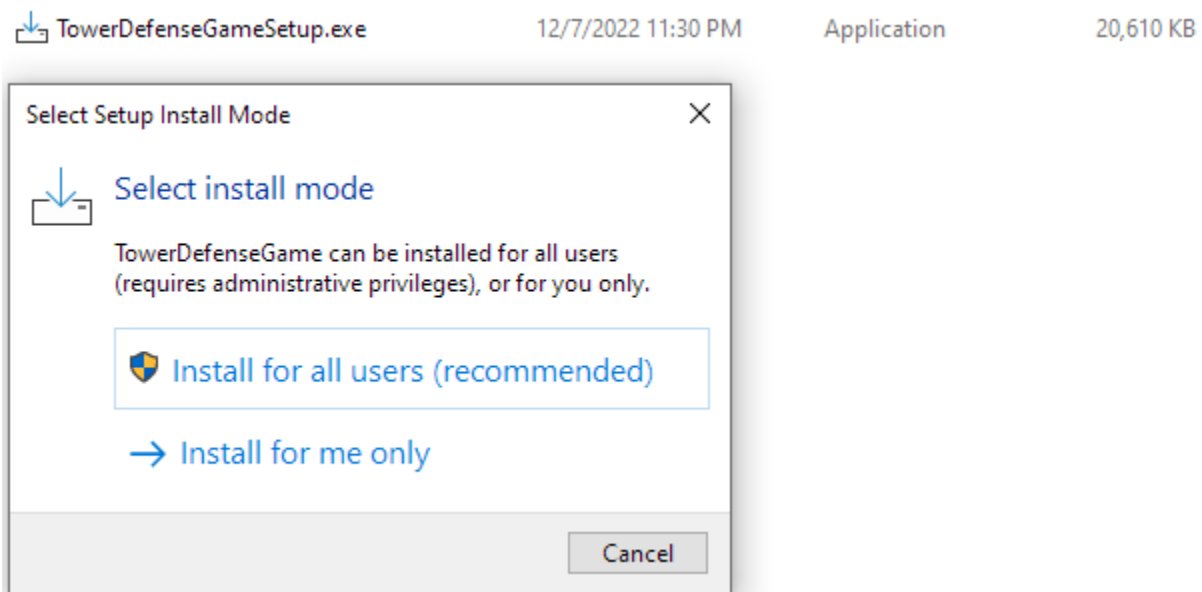

System Requirements:

- Windows 10
- 100 MB storage space

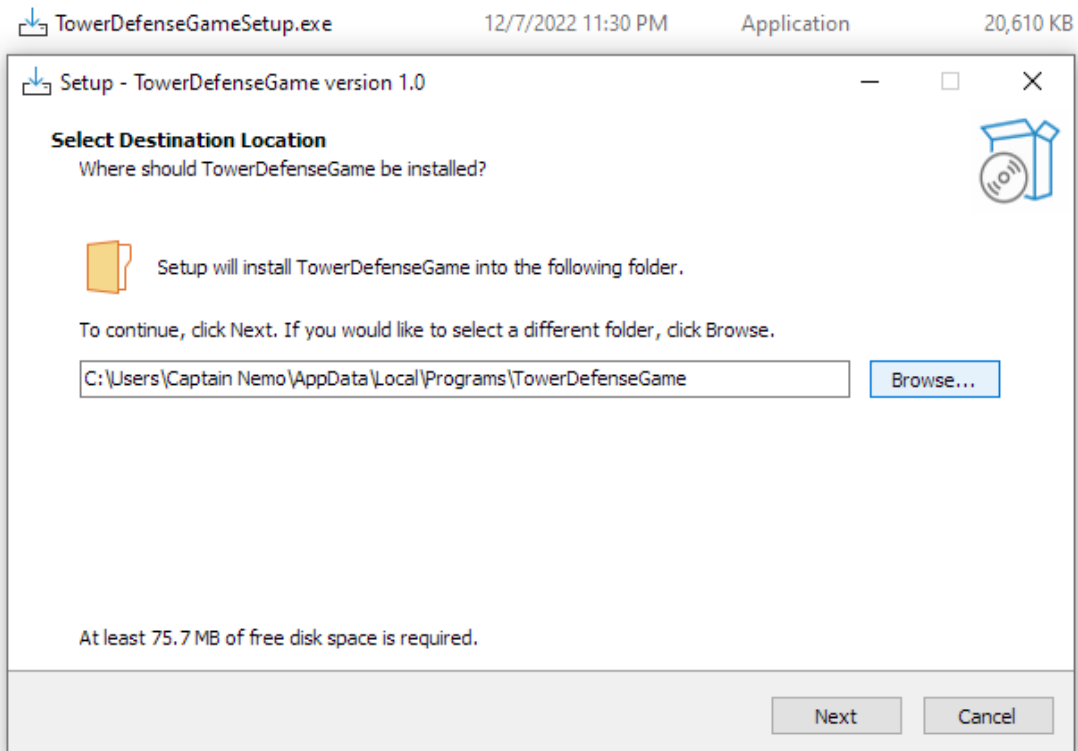

Installation Steps:

You should receive a zip file containing our documentation, source code, and an installer called “TowerDefenseGameSetup.exe”. After extracting the zip file to a folder of your choice, run the installer.

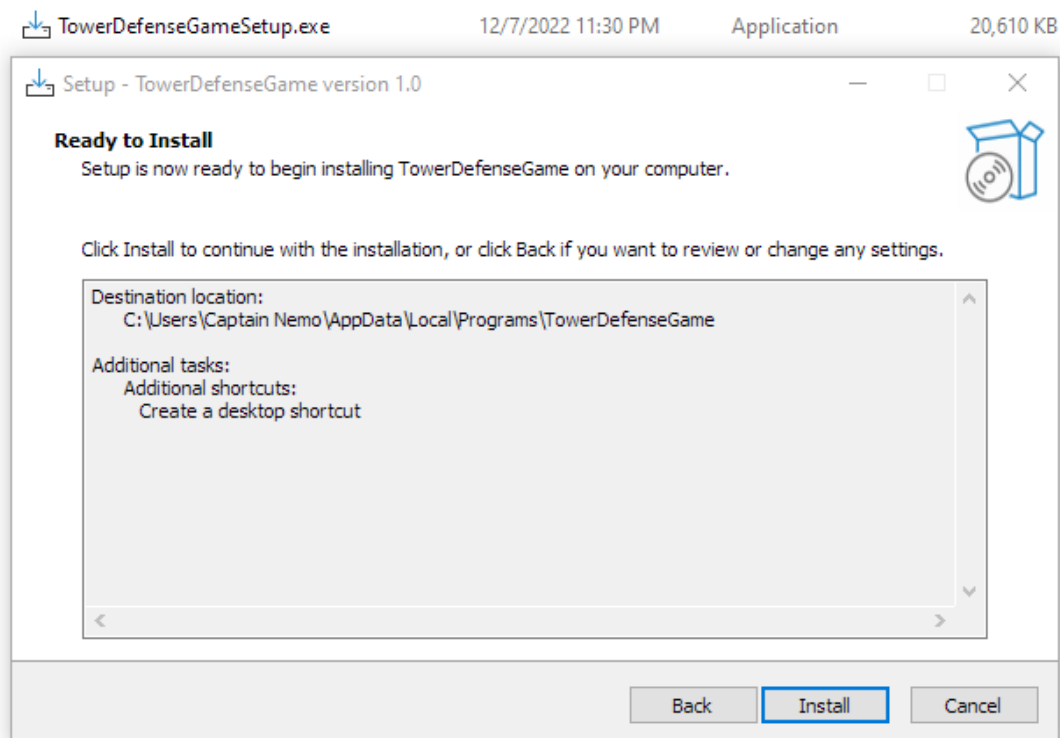

0. You may get a pop-up from Windows Defender since we are an unknown publisher installing an executable on your computer, which will require you to select “run anyway”.
1. You will get a prompt to install for all users (this will require administrator approval) or just for you. We suggest just installing for yourself, but it is your preference:

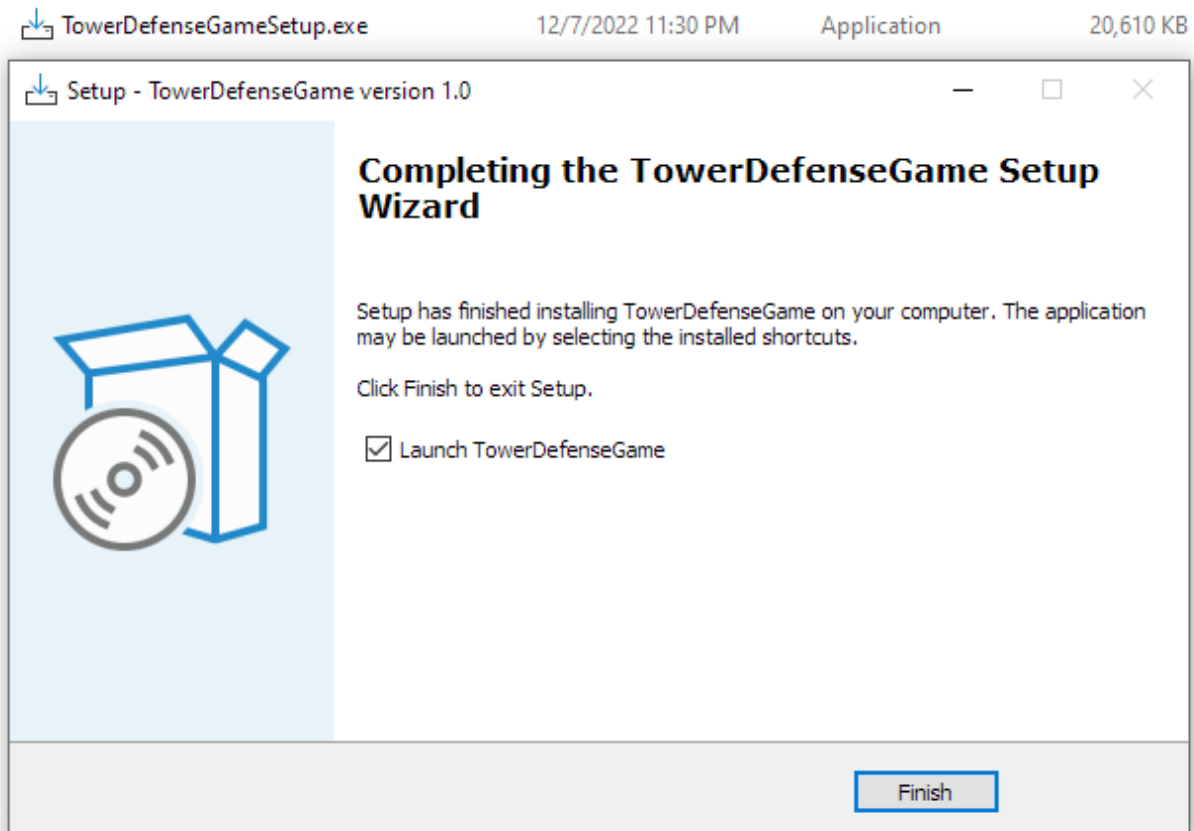

2. You will then be given the option of installing the application files to your desired directory. Click ‘Next’. By default the installer will create a desktop shortcut, but you have an option to uncheck that if you’d like.

3. You'll then have an option to review the file path of installation and whether you wanted a desktop shortcut or not.

4. Once the install runs, click finish and the game will load! See our User Manual and other documentation for more details!

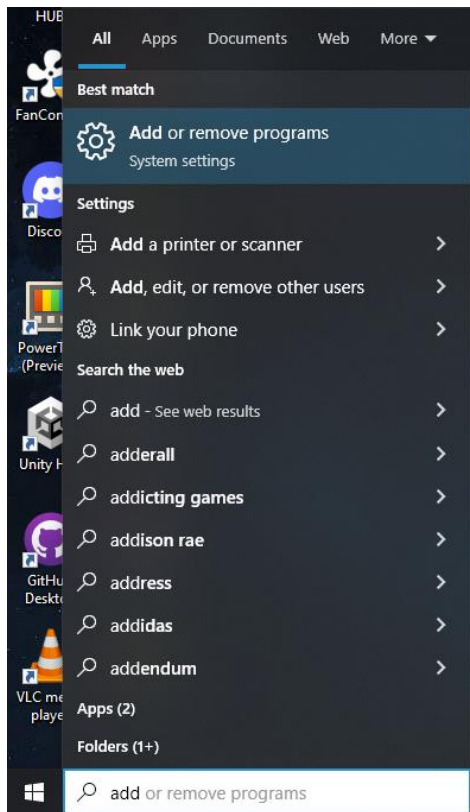

Troubleshooting

While we did not have issues testing the installer ourselves, there are steps you can take if you have issues.

- Turn your computer off and back on and try running the installer again
- Install as administrator to all users rather than just yourself.
- Verify Antivirus is not blocking installation
- Attempt to uninstall if it may have installed improperly and reinstall (Guide below)

1. In the Start Menu, type “Add or remove Programs” and open:

2. Navigate to find TowerDefenseGame and click “uninstall”
